Business Question and Visualization Report

Field	Details
Date	31 October 2026
Team ID	Not provided
Project Name	Health360: Clinical & Healthcare Risk Analysis
Maximum Marks	5 Marks

Visualization development transforms dataset fields into graphical views that make comparisons and patterns easier to inspect. Health360 uses Tableau to explore demographic groups, lifestyle indicators, BMI, blood pressure and recorded heart-disease outcomes.

Business Questions and Visualisation

The assignment template uses the term business questions. For Health360, these are framed as analytical questions about the sample healthcare dataset.

No.	Project question	Corresponding visualization
1	How does average blood pressure vary across the six age groups?	Average blood pressure by age group (bar chart).
2	What proportion of sample records belongs to each age group?	Patient distribution by age group (pie chart).
3	How are fatigue categories distributed across age groups?	Age-group distribution by fatigue condition (stacked bar chart).
4	How is the population distributed across exercise levels?	Exercise level distribution (donut chart).
5	How do alcohol and smoking indicators compare across age groups?	Alcohol and smoking consumption across age groups (bar chart).
6	How do BMI categories relate to recorded heart-disease outcomes?	BMI category and heart-disease visualizations.

Additional analysis questions

- How do recorded heart-disease outcomes vary across age groups?
- How do exercise level and fatigue patterns compare between age groups?
- Which demographic and lifestyle comparisons are useful to highlight in the Tableau story?

Visualization references

Visualization	What the viewer can examine
Average blood pressure across age	Compare displayed averages for Adult, Middle Age, Old, Senior, Teenager and Young Adult.
Patient distribution by age group	Compare the relative representation of each age cohort.
Fatigue by age group	Compare the displayed fatigue-condition categories within each age group.
Exercise level distribution	Inspect proportions of the three exercise-level categories.
Alcohol and smoking by age group	Compare the two displayed lifestyle measures across cohorts.

Visualization	What the viewer can examine
BMI and heart-disease analysis	Explore recorded heart-disease outcomes across BMI categories.
Lifestyle-risk heatmap	Inspect fatigue/exercise patterns across age groups.

Dataset and interpretation note

The project materials describe a 5,000-record sample healthcare dataset. This is a sample-data count, not a verified count of real patients. These questions guide exploration; they do not establish medical relationships or causation. Health360 is not a diagnostic tool.
